online platforms, and connected services in **2026**.

If you want to know whether this is our most recent report on Indonesia, or if you're looking for data on digital trends and behaviours in Indonesia for other years, you can find [DataReportal's](#) full collection of (free!) reports on Indonesia by [clicking here](#).

You'll also find the complete **Digital 2026** report for Indonesia in the "*full report*" section towards the bottom of this page, but we'll start this article by taking a look at the essential headline numbers for Indonesia this year.

Just before that, we'd like to say a big thank you to [Meltwater](#) and to [We Are Social](#) for their support of this year's report.

A note on dates

To align our reporting more closely with our clients' digital planning cycles, we are aware that we are publishing **Digital 2026** at the end of 2025.

Many of the data points included in this article are

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

October 2025, so they're still highly representative of digital adoption and evolving preferences and behaviours in Indonesia in 2026.

However, because we've changed our publication cycle since our Digital 2025 reports, please pay close attention to the dates and time periods stated in this article and in our accompanying Digital 2026 reports, and **avoid** calculating values for change over time by referencing data published in our previous reports and articles.

We've included a wealth of figures for change over time within this article, and you'll find even more within the full report at the bottom of this page.

OK, ready to start exploring the data?

Here are [DataReportal](#)'s essential headlines for the adoption and use of connected devices and services in Indonesia in 2026:

- A total of **331 million** cellular mobile connections were active in Indonesia in late 2025, with this figure equivalent to **116 percent** of the total population. However, note that some of these connections may only include services such as voice and SMS, and some may *not* include access to the internet.
- There were **230 million** individuals using the internet in Indonesia at the end of 2025, when online penetration stood at **80.5 percent**.
- Indonesia was home to **180 million** social media user identities in October 2025, equating to **58 percent** of the total

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

So, let's take a closer look at what the numbers tell us, starting with some valuable context relating to the population of Indonesia.

ADVERTISEMENT

Population of Indonesia in 2026

Data from the United Nations indicates that the population of Indonesia stood at **286 million** in October 2025.

The same dataset also shows that Indonesia's population **increased**

(+0.8 percent) from the end of 2024 and the

by the end of 2025, the population of Indonesia's

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

At that time, **49.8 percent** of Indonesia's population was **female**, while **50.2 percent** of the population was **male**.

Note: gender data were only available for "female" and "male" at the time of report production.

Indonesia's population by age

At the end of 2025, the median age of Indonesia's population was **30.4**, with half of Indonesia's population above this age, and the other half of the population below it.

For added context, here's how Indonesia's total population broke down by age group at the end of the year, according to the United Nations' data:

- **7.7 percent** was between the ages of **0 and 4**.
- **13.1 percent** was between the ages of **5 and 12**.
- **12.5 percent** was between the ages of **13 and 17**.
- **12.5 percent** was between the ages of **18 and 24**.
- **12.5 percent** was between the ages of **25 and 34**.

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

- **12.9 percent** was between the ages of **45 and 54**.
- **9.7 percent** was between the ages of **55 and 64**.
- **7.5 percent** was aged **65 and above**.

Note: percentages may not sum to 100 percent due to rounding.

There were **331 million**

connections in
the end of 2025.

many people
more than one mobile
it's not unusual for

AD

For example, the same person might have one mobile connection for personal use, but also use a separate mobile connection for work activities. The rise of [eSIMs](#) has made this even easier over recent years.

Indeed, GSMA Intelligence's numbers indicate that mobile connections in Indonesia were equivalent to **116 percent** of the total population in October 2025.

Looking at trends over time, the number of mobile connections in Indonesia **decreased** by **18 million** (-5.2 percent) between the end of 2024 and the end of 2025.

Meanwhile, GSMA Intelligence's data suggests that **96.6 percent** of mobile connections in Indonesia can now be considered "broadband", which means that they connect via 3G, 4G, or 5G mobile networks.

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

es that connect to mobile networks do use cellular mobile. For example, some plans may only be for voice and SMS.

Internet use in Indonesia in 2026

At the time of report production, the analysis of the latest data indicated that there were 100 million internet users in Indonesia in October 2025.

Indonesia's internet

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

For reference, our internet user figures are informed by data from numerous reputable sources, including:

- The **ITU** (the *International Telecommunication Union*), which is the United Nations' specialised agency for digital technologies that "*facilitates international connectivity in communication networks*".
- **GSMA Intelligence**, which is the market intelligence arm of the **GSMA**, a global organisation that "*unifies the mobile ecosystem to discover, develop, and deliver innovation*".
- **Eurostat**, which is the statistical office of the European Union.
- National telecommunications authorities, government regulators, and national statistics offices.
- Planning tools provided by various large internet

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

s, including Google

is of this data
e number of
Indonesia

And for added perspective, Indonesia's internet *adoption rate* (i.e. the percentage of the total population that uses the internet) **increased** by a relative **7.8 percent** (+586 **basis points**) during the same period.

But these user figures also suggest that **55.8 million** people in Indonesia did **not** use the internet at the end of 2025, suggesting that **19.5 percent** of the population remained "**offline**" at the end of the year.

However, complexities associated with the collection and analysis of internet user data mean that it can often take several months before research is ready for publication.

As a result, the latest *published* figures for internet use may *under-represent* current realities, and actual rates for internet adoption and year-on-year growth may be higher than the figures shown here

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

comprehensive
for further details.

Indonesia's current "state of digital" compares with connectivity in other countries by reading our flagship [Digital 2026 Global Overview Report](#), which includes hundreds of slides of global digital data, as well as our in-depth analysis of what these numbers might mean for you.

Internet connection speeds in Indonesia in 2026

Figures published by [Ookla](#) indicate that internet users in Indonesia could have expected the following internet connection speeds at the end of 2025, reported in megabits per second (Mbps):

- Median **mobile** internet connection speed via cellular networks*: **45.01**
- Median **fixed** internet connection speed: **39.88**

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

speed in Indonesia **increased** by **15.61 Mbps** (+53.1 percent) in the twelve months to August 2025.

Meanwhile, the company's data shows that the download speed of the typical **fixed** internet connection in Indonesia **increased** by **7.82 Mbps** (+24.4 percent) during the same period.

Note: values for mobile internet connection speeds only include data transfer via **cellular mobile networks (e.g. 3G, 4G, and 5G connections), and do **not** represent the speed of mobile connections via WiFi where the WiFi router connects to the internet via "fixed" infrastructure.*

Statistics for Indonesia in 2026

Proprietary analysis conducted by [Kepios](#) on behalf of [DataReportal](#) indicates that there were **180 million** active social media user identities in Indonesia in October 2025.

For perspective, this figure was equivalent to **62.9 percent** of Indonesia's total population at the end of 2025.

However, while Kepios's methodology strives to "de-duplicate" social media users across different social platforms — and, wherever possible, to remove accounts that do not represent individual human users — it's important to stress that our social media user identities figures may **not** represent unique individuals (see our detailed [notes on data](#) to learn why).

Moreover, due to complexities associated with de-duplicating

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

As a result, the figures that we publish for a country's overall social media use may sometimes look very similar to the statistics that we publish for the most popular social media platform in that country.

Separately, please also note that the signals and sources that we rely on to inform these social media figures make regular changes and corrections to their data.

Consequently, the values for social media use shown here might appear to be quite different to the numbers that we published in previous years.

Because of this, we advise **significant caution** when comparing the values for social media user identities published in this year's reports with those published in previous years, especially because changes in our

DataReportal uses cookies to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our privacy policy.

may be the result in the source data, ads will be the result actual user

only pertinent when it

published below, rather than trying to re-calculate growth figures using data published in our previous reports.

And on that note, **Kepios's** analysis shows that social media user identities in Indonesia **increased by 37 million** (+26.0 percent) between late 2024 and the end of 2025.

Turning our attention to user demographics, data published in the ad planning tools of top social media platforms indicates that there were **180 million** user identities aged **18 and above** using social media in Indonesia at the end of 2025, which was equivalent to **88.9 percent** of the total population aged **18 and above**.

At that time, **56.3 percent** of Indonesia's social media user identities were **female**, while **43.7 percent** were **male**.

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

context, it may be that **78.2 percent** of total internet user (by age) used at least one social media platform in

report gender data for “female” and “male”.

It's important to stress that these advertising reach figures do **not** necessarily represent the same thing as monthly active user figures though, and there may be meaningful differences between the size of YouTube's ad audience and its total active user base.

Caveats aside, the company's own data suggests that YouTube's ad reach in late 2025 was equivalent to **52.7 percent** of Indonesia's total population at the end of the year.

To put those figures in perspective, YouTube ads reached **65.5 percent** of Indonesia's total internet user base (regardless of age) in October 2025.

At that time, **48.7 percent** of YouTube's adult ad audience in Indonesia was **female**, while **51.3 percent** was **male**.

Note: at the time of report production, Google's advertising published audience was 52.7 percent female and 47.3 percent male.

er growth in

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

YouTube's potential ad reach in Indonesia **increased** by **8.00 million** (+5.6 percent) between the end of 2024 and late 2025.

Meanwhile, on a quarter-by-quarter basis, the same data show that the number of users that marketers could reach with ads on YouTube in Indonesia **increased** by **6.00 million** (+4.1 percent) between July 2025 and October 2025.

However, it's worth noting that Google only publishes updates to its figures for YouTube reach every three to six months, and actual reach may have evolved since this data was published in Google's ad planning tools.

Facebook users in Indonesia in 2026

Data published in Meta's advertising resources indicate that **Facebook** had **121 million** users in Indonesia in late 2025.

However, Meta has made important changes to the way its advertising resources report audience reach data over recent months — including making meaningful revisions to published audience data — so the figures shown here **may not be directly comparable** with figures published in our previous reports.

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

about these
see our extensive

user growth in

potential ad reach in Indonesia **increased** by **3.50 million** (+3.0 percent) between October 2024 and October 2025.

For more recent context, the same data show that the number of users that marketers could reach with ads on Facebook in Indonesia **decreased** by **1.50 million*** (-1.2 percent) in the three months between July 2025 and October 2025.

However, it's important to stress that Meta's advertising reach figures are **not** the same as the active user figures that the company may report in its investor earnings announcements, and they should not be interpreted as such.

As Meta states in a note published in its ad planning tools,

"Estimated audience size is not a proxy for monthly or daily active users, or for

*ent. Estimates
igned to match
, census
or other
and may differ
g on factors*

has, how many temporary visitors are in a particular geographic location at a given time, and Meta user-reported demographics.”

As a result, changes in ad reach may **not** necessarily indicate any change in the overall user bases of Meta’s platforms.

But despite these caveats, Meta’s ad reach data still offers valuable insights into how Facebook use is evolving, so let’s take a closer look.

***Important note:** in addition to regular changes in active user numbers, social media platforms may revise or “correct” the audience reach figures that they report in their advertising tools, and these interventions may result in an apparent **decline** in reported reach.

For example, platforms may

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

ts that do not meet
ervice — such as
ate duplicate or
s — or when they
ts to be engaging in
ctivity.

meaningful changes in reported reach, and such adjustments may significantly distort trends and values for change over time.

However, in many cases, such declines in reported ad reach do **not** indicate any change in legitimate platform use by “real” humans, and should not be interpreted as such.

As a result, we recommend **significant caution** when interpreting trends relating to negative changes in reported audience reach.

Please see our detailed [notes on data](#) to learn whether our analysis has detected such changes in relevant figures.

Facebook adoption in Indonesia

Facebook’s ad reach in Indonesia was equivalent to **42.2 percent** of the total population at the end

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

vs people aged **13**
use Facebook
worth highlighting
ent of the
nce in Indonesia

Furthermore, it may be useful to know that the company's data indicates that **60.2 percent** of adults aged **18 and above** in Indonesia used Facebook at the end of 2025.

And for additional context, Facebook's ad reach in Indonesia was equivalent to **52.5 percent** of the local internet user base (regardless of age) in October 2025.

At the end of 2025, **41.9 percent** of Facebook's *adult* ad audience in Indonesia was **female**, while **57.8 percent** was **male**.

Note: at the time of report production, Meta's advertising tools only showed audience gender data for "female" and "male" users. However, the published figures for "female" and "male" users do not always sum to the published total figure, so the gender share values shown here

100 percent.

AD

use Instagram, so it's also worth highlighting that **47.5 percent** of the "eligible" audience in Indonesia used Instagram at the time of report production.

Meanwhile, data published in the company's ad tools indicate that **49.7 percent** of adults aged 18 and above in Indonesia used Instagram at the end of 2025.

Similarly, it may be helpful to know that Instagram's ad reach in Indonesia at the end of 2025 was equivalent to **46.7 percent** of the local internet user base (regardless of age).

In late 2025, **53.2 percent** of Instagram's *adult* ad audience in Indonesia was **female**, while **46.8 percent** was **male**.

Note: at the time of report production, Meta's advertising tools only showed audience gender data for "female" and "male" users. However, the data for "female" and "male" users for "female" and "male" users do not always sum to 100 percent, so the values shown here may not always sum to 100 percent.

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

Data published in Meta's planning tools show that Instagram's potential ad reach in Indonesia **increased** by **7.70 million** (+7.7 percent) between October 2024 and October 2025.

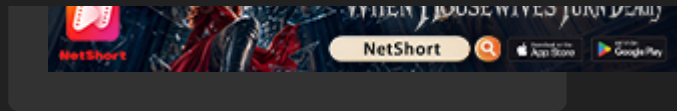

On a quarterly basis, the company's data also reveal that the size of Instagram's ad audience in Indonesia **decreased** by **1.40 million*** (-1.3 percent) between July 2025 and October 2025.

As we noted in the Facebook section above though, changes in the audience reach figures published in Meta's ad planning tools **do not** necessarily correlate with overall changes in its platforms' active user bases.

***Important note:** to make better sense of these trends, please refer to our guidance on interpreting declines in platform reach towards the end of the Facebook section above.

TikTok users in Indonesia in 2026

Figures published in TikTok's advertising resources indicate that **TikTok** had **180 million** users aged **18 and above** in Indonesia in late 2025.

Note that TikTok allows marketers to target TikTok ads to users aged *13 and above* via its advertising tools, but these tools only show audience data for users aged *18 and above*.

And for context, TikTok's figures indicate that TikTok ads reached **88.9 percent** of all adults aged 18 and above in Indonesia at the end of 2025.

Meanwhile, TikTok's ad reach in Indonesia was equivalent to **78.2 percent** of the local internet

at the end of the year, a 1.5 percentage point increase.

6.3 percent of the total audience in Indonesia was **female**, whereas the remaining was **male**.

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

resources only published audience gender data for “female” and “male” users.

TikTok user growth in Indonesia

Data published in TikTok’s own ad planning tools show that TikTok’s potential ad reach in Indonesia **increased** by **15.0 million** (+9.1 percent) between the end of 2024 and late 2025.

Meanwhile, figures indicate that the potential reach of ads on TikTok in Indonesia **decreased** by **14.3 million*** (-7.3 percent) between July 2025 and October 2025.

Having said that, ad audiences often only account for a subset of a platform’s total users, and given that TikTok’s ad tools only publish data for users aged **18 and above**, it’s important to remember that trends in TikTok’s ad reach figures may not necessarily match platform’s overall

to **0.4 percent** of the total population at the end of the year.

However, Reddit only allows people aged **13 and above** to create user accounts on its platform, so it may be helpful to know that Reddit's reported ad reach figure was equal to **0.6 percent** of the "eligible" audience in Indonesia in late 2025.

Meanwhile, Reddit's ad reach in Indonesia was equivalent to **0.5 percent** of the local internet user base, regardless of age.

Reddit user growth in Indonesia

For perspective, data published in Reddit's own ad planning tools show that Reddit's potential ad reach in Indonesia **increased** by **807 thousand** (+182 percent*) between the end of 2024 and late 2025.

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

On a quarter basis, the data shows that marketers saw a 100 percent increase in ads on Reddit in Q4 2024, up from 100 percent in Q3 2024. This is a 7 percent increase between Q4 2024 and Q1 2025. By October 2025.

represent monthly active user numbers, and the size of Reddit's ad audience may be significantly different to its total active user base.

****Advisory:** we're aware of some unusually large changes in Reddit's reported ad reach over recent months, but we have elected to republish these changes in source data "as is", in order to enable readers to make their own judgements. However, as noted above, please remember that changes in Reddit's reported ad reach may **not** be representative of changes in the platform's active user base.*

X users in Indonesia in 2026

Numbers published in X's advertising resources indicate that **X** had **22.9 million** users in Indonesia in late 2025.

This figure means that X's ad reach in Indonesia was equivalent to **8.0 percent** of the total population at the time.

However, it's important to stress that these advertising reach figures are **not** the same as monthly active user figures, and there may be meaningful differences between the size of X's ad audience and its user base.

only allows people **above** to use its worth adding that s suggest that

Furthermore, data published in the company's ad tools indicate that **10.7 percent** of adults aged 18 and above in Indonesia used X at the end of 2025.

And for additional context, X's ad reach in Indonesia was equivalent to **9.9 percent** of the local internet user base (regardless of age) at the end of the year.

In late 2025, the company's own data indicated that **42.3 percent** of X's *adult* ad audience in Indonesia was **female**, while **57.6 percent** was **male**.

However, X appears to *infer* its users' gender, by analysing signals such as the name that users enter in their profile, and their broader activity on the platform.

This contrasts with the gender data offered in the advertising tools of platforms like Facebook, which tend to rely on gender details that users themselves enter in their own

offer a different picture of X use by gender compared with X's own audience data.

Having said that, the apparent gender "skew" that frequently appears in X's inferred gender data may also be due in part to the high number of legitimate but "non-human" accounts that feature in X's active user data, including accounts that represent businesses and brands, animals, music groups, and various other entities [note that X doesn't currently distinguish between "people" and other types of account in the ways that platforms like Facebook and Instagram do].

Regardless of the cause though, we'd advise caution when analysing or interpreting X's reported figures for use by gender.

X user growth in Indonesia

Data published in X's own ad

show that X's

marketers could reach with ads on X in Indonesia **decreased** by **837 thousand*** (-3.5 percent) between July 2025 and October 2025.

However, please note that the figures published in X's planning tools are liable to significant fluctuation — even over short periods of time — and these anomalies may impact the reliability and representativeness of these change figures.

Moreover, we've identified some unusual trends in the data reported in X's advertising tools in recent months, so we'd advise caution when it comes to analysing *changes over time* in these X reach figures.

***Important note:** to make better sense of these trends, please refer to our guidance on interpreting declines in platform reach towards the end of the Facebook section above.

Threads users in Indonesia in 2026

Numbers published in Meta's advertising tools indicate that **Threads** had **8.15 million** users in Indonesia in late 2025.

The company's regularly revised figures suggest that Threads's ad reach in Indonesia was equivalent to **2.8 percent** of the total population at the end of the year.

However, Meta only allows people aged **13 and above** to use Threads, so it's also worth highlighting that **3.6 percent** of the "eligible" audience in Indonesia used Threads at the time of report production.

Meanwhile, data published in the company's ad tools indicate that **4.0 percent** of adults aged 18 and above in Indonesia used Threads at the end of 2025.

DataReportal uses [cookies](#) to understand your interests and deliver custom content. You can decline non-essential cookies via the buttons below. Learn more in our [privacy policy](#).

Indonesia was **female**, while **54.0 percent** was **male**.

Note: at the time of report production, Meta's advertising tools only showed audience gender data for "female" and "male" users. However, the published figures for "female" and "male" users do not always sum to the published total figure, so the gender share values shown here may not sum to 100 percent.
