Tuesday 24

Mobile Money accounted for \$2 trillion in transactions in 2025, doubling since 2021 as active accounts continue to grow

Monthly active mobile money accounts saw their highest growth since 2021.

24 March 2026, London: More than \$2 trillion flowed through mobile money wallets globally in 2025, found the [State of the Industry Report on Mobile Money 2026](#), prepared by the [GSMA Mobile Money](#) programme. This is an important threshold [Skip to content](#) the exponential growth in transaction values the industry has experienced in recent years.

reached 2.3 billion registered accounts in 2025,
growing by 268 million.

Vivek Badrinath, GSMA Director General,
comments: *"Mobile money has become one of the world's most impactful financial services. What began as a simple way to move money has evolved into a global financial ecosystem, reshaping how hundreds of millions of people manage their financial lives. The market is reaching new heights and greater maturity. Adoption and regular use are surging, and value is scaling even faster than volume, with more than \$2 trillion flowing through mobile money in 2025 – doubling from the first trillion in just four years.*

"Looking ahead, the industry's growing scale and sophistication will bring new opportunities, and new responsibilities. By prioritising interoperability and cross-border harmonisation; engaging in digital public infrastructure; strengthening consumer protection and fraud controls; and accelerating women's inclusion and financial health outcomes, we can ensure mobile money continues to provide safe, inclusive and sustainable digital financial

services."

highest it has been since 2021. However, this still leaves almost 75% of accounts inactive monthly, with fraud remaining widespread and transaction taxes often encouraging users to revert to cash in the countries where they're in effect, negatively impacting financial inclusion.

Through more frequent usage, mobile money users can improve their financial health – the capacity to manage day-to-day financial needs, withstand shocks and invest in the future – by benefiting from the increasing provision of adjacent services like credit, savings and insurance. The report found that the number of mobile money providers offering insurance increased by one-third in 2025. Mobile-money enabled credit remains the most widely offered adjacent financial service, and this is nearly matched by those offering saving options.

Regulation is supporting mobile money in improving financial inclusion

Regulation is playing a key role in expanding the reach of mobile money, the GSMA reports. Over 60% of mobile money providers believe that [Skip to content](#) know-your-customer and consumer protection regulations have supported their

persists in mobile money account ownership across seven out of 10 countries surveyed in the report. Aside from in Ghana, Kenya and Nigeria, women who own a mobile money account are still less likely than men to have used it within the past month.

Mobile money fosters innovation for good

In addition to accelerating financial inclusion and supporting improved financial health, mobile money usage is enabling wider social and humanitarian benefits by enabling rapid payouts during crises, particularly in remote regions. However, for these and other use cases to succeed, mobile money needs to be complemented by digital financial literacy initiatives to continue responsible growth across regions and demographics.

Notes for editors: What is mobile money?

Per the IMF's Financial Access Survey, mobile money is a pay-as-you-go digital medium of exchange and store of value using mobile phones, facilitated by a network of mobile money agents. It is a financial service primarily offered to its clients by a mobile network operator or another entity that partners with mobile network operators, independent of the traditional banking network. A bank account is not required to use mobile money services – the only pre-requisite is a basic mobile phone. On the other hand, mobile banking is the use of an application on a mobile device to access and execute traditional banking services, such as check deposits, balance inquiry, and payment transfers.
